Innovation

ACTI PACK launches the very first **PET jars** combining a very good **resistance to hot filling temperatures**, a **resistance to pasteurization** and a round, panel-less shape, **making labeling easier**. It has been developed in partnership with ASB Nissei.

The neck undergoes a slow crystallization process that keeps it away from losing its shape during **hot filling**. Both metal caps and tamper-resistant plastic caps can fit.

PET jar "Hot fill" is designed for food-industry and achieves certification to the following standards ISO 22000. It is perfect to package jam, sauces, condiments, and it offers many advantages over glass: **light weight** for cost optimization in logistic, **unbreakable** to ensure security of packaging which is essential to food filling and to eliminate risks of breakage in stores, **recyclable** with possibility of manufacture using 25% RPET, **ecologic** to improve your packaging carbon footprint ...

Technical information

Neck : **Twist Off 63**

Filling volume: **350 ml**

Weight: **30 grs**

Raw material: **PET**

Hot filling: **92°C** maximum depending on the product

Pasteurization: **85°C** during 20 minutes then cooling

Crystallized neck
